INDEX TO SCIENTIFIC NAMES IN TAXON

VOLUME 46, 1997

Family names given originally in languages other than Latin have been treated as though they were in Latin. The abbreviations for taxonomic ranks, where necessary, conform to those used in the *Code* and in *Taxon*. All appearances of scientific names have been included, including names used in figures, in figure captions, and in tables.

Infrageneric and infraspecific epithets are arranged in descending hierarchical order – [genus], subgenus, sectio, series, [binomen], subspecies, varietas, forma; that is to say, the abbreviated rank designators are not used as part of the alphabetisation.
